                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple scierosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with mRNA, and (b) measuring the label detectably bound to each probe of
predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                           Human peptide encoded by genome-derived single exon probe SEQ ID 31860.

the array; identifying exons in a eukaryotic genome, comprising

(a) algorithmically predicting at least one exon from genomic sequences
of the eukaryote; and (b) detecting specific hybridisation of detectably
labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
having a fragment identical to the predicted exon, the probe is included
in the above mentioned microarray; assigning exons to a single gene,
comprising (a) identifying exons from genomic sequence by the method
above and (b) measuring the expression of each of the exons in several
tissues and/or cell types using hybridisation to a single exon
microarrays having a probe with the exon, where a common pattern of
expression of the exons in the tissues and/or cell types indicates that
the exons should be assigned to a single gene; a peptide comprising one
of 12011 sequences, mentioned in the specification, or encoded by the
probes/open reading frames (ORF). The probes are used for gene
probes/open reading frames (ORF). The probes are used for gene
expression analysis, and for identifying exons in a gene, particularly
using human lung derived mRNA and for the study of lung disease
copins hierstitial lung disease (ILD), familial idiopathic pulmonary
librosis, neurofibromatosis, tubercus sclerosis, Gaucher's disease,
Niemann-Pick disease, Hermansky-Pudlask syndrome, fibrocystic
pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic
pulmonary alveolar proteinosis, Karagener syndrome, incordial purposed the present sequence is a peptide/protein
encoded by a single exon probe of the invention.

Company and the sexon probe of the invention of forming a peptide/protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic senescent cell antigen and peptide(s) - used to detect antibodies to SCA, study cellular ageing and auto-immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human erythrocyte membrane anion-transport protein (band 3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 86;

The amino acid sequence is that of the human erythrocyte anion-transport protein (band 3). Amino acids 538-554 (ANION 1) or 812-827 (COCH) code for a peptide which is immuno-reactive with antibodies to senescent cell artigen (SCA). The antigen and peptides can be used in any method or technique involving or requiring the inhibition of the binding of senescent cells in vitro or in vivo. The prods. Can be used in to examine various physiological, biochemical, and immunological mechanisms in humans and other animals, such as those including to cellular ageing, degeneration, and life span; removal of senescent cells; anion transport across cellular membranes; disease mechanisms where increased senescent cell IgG may play a role, such as rhoundary and semilytic anemial, sickle cell anaemia, and idiopathic thrombocytopenia purpura; other autoimmune disease mechanisms, such as rhoundary and strike cell anaemia, and cancer. More structured arthritis and systemic lupus erythematosus; and other specifically, the prods. are useful in cosmetic and pharmaceutical compsns., diagnostic kits, and methods for detecting or measuring separating anions from a gas or liquid, or diagnosis and treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NBC; sodium bicarbonate transporter family; pH regulation; immunoassay; treatment; water retention; blood pressure; acidosis; inflammation; cell proliferation; cancer; sperm activation; inactivation; epilepsy; hydroencephaly; glaucoma; colitis; salamander; AEI; anion exchange.

New nucleic acid molecules encoding proteins of the Sodium Bicarbonate Cotransporter (NBC) family - useful for identifying agents that agonise or antagonise NBC activity and treating

ö

Gaps

ö

```
a method resulting in the isolation of a novel salamander sodium bicarbonate transporter (NBC). NBC proteins and nucleic acid sequences may be used to treat pathological processes including water retention, increased blood pressure, chronic respiratory and metabolic acidosis, inflammation, cell proliferation, cancer, sperm activation/inactivation, hydroencephaly, epilepsy, glaucoma and colitis. Members of the NBC family of proteins can be used (i) as a target to identify agents that block or stimulate NBC mediated pH regulation, (ii) as a target to bait to identify agents that block or stimulate activity of an NBC protein, and identify agents that block or stimulate activity of an NBC protein, and (iv) as a target to assay for NBC-mediated activity. Anti-NBC antibodies are also useful as modulators of NBC activity, useful in the immunoassays for detecting NBC expression/activity and for purifying an NBC protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Erythrocyte band 3 anion transporter protein; human; hypercoagulation; iron-nitrosyl hemoglobin; electron paramagnetic resonance; UV spectra; EPR; nitric oxide; antianemic; antibacterial; immunosuppressive; vasotropic; antilnflammatory; antiasthmatic; respiratory; antiarthritic; cerebroprotective; red blood cell membrane defect; vasculopathy; espectic shock mycoardial depression; pancreatitis; sickle cell crisis; urinary tract infection; progressive respiratory failure; septicemia; ischemia; arthritis; asthma; cerebritis; bronchitis; vasculitis.
                                                                              This sequence represents the anion exchange protein AE1 which is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel method for determining the predominant

involves obtaining electron paramagnetic resonance (EPR) or UV spectra of involves obtaining electron paramagnetic resonance (EPR) or UV spectra of intricoxide (NO) with hemoglobin and determining if the composition shows non-cooperativity or cooperativity in binding of NO to the hemoglobin. The products of the invention have antianemic; antibacterial; mmunosuppressive; vasotropic; antiinflammatory; antiasthmatic; respiratory; antiarthritic and cerebroprotective activity. The products of the invention are used to produce methods of therapy for medical disorders characterized by red blood cell membrane defects and for a variety of hypercoaquiable and vasculopathic states, particularly for patients with septic shock who develop myocardial depression, parients with septic shock who develop myocardial depression, parients with septicemia as a complication of urinary tract infection and patients with schemia, patients in a sickle cell crisis and for treating inflammatory conditions such as arthritis, asthma, cerebritis, bronchitts and vasculitis. The methods are also used for preserving red blood cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated Band 3 polypeptide that comprises any of 4.20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-1331 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptide; malarial infection; drug resistance; vaccine; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated Band 3 polypeptide which selectively binds to merozite surface protein-1, useful for the prevention and treatment of malarial infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
physiological effect of a composition comprising hemoglobin which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-131 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising harmful side effects and drug resistance that may be due to non-specific, therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 protein.
a cognate molecule present in the host and subsequently minimising harmful side effects and drug resistance that may be due to non-specific therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 protein.

```
The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for polypeptides and antibodies to the polypeptides are useful for with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the rest proteins are useful in genetic vaccination, testing and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopolesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAUS510-AAU3304 represent the amino acid in treatment of leukaemias. AAUS510-AAU3304 represent the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy -

                                                                                                             any of 4.20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-1331 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and cognate molecule present in the host and subsequently minimising therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSPP-1 polypeptide or a polypeptide with any of 8 291.131 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising a cognate molecule present in the host and subsequently minimising therapoutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; Band 3 polypeptide; malarial infection; drug resistance; vaccine; protozoacide; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated Band 3 polypeptide which selectively binds to merozite surface protein-1, useful for the prevention and treatment of malarial infection
                                                                                       The invention relates to an isolated Band 3 polypeptide that comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 20;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-SEP-2002.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAE29349;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (SELI-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 2
AAE29349
```

THE STATE OF THE S

```
The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        is associated with coronary heart disease. ABG47348-ABG59930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA11535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human brain expressed single exon probe encoded protein SEQ ID NO: 31897.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
             Protein #6029 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide #6670 encoded by probe for measuring placental gene expression.

The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with mRNA, and (b) measuring the label detectably bound to each probe of
predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                             Human peptide encoded by genome-derived single exon probe SEQ ID 31860.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hermansky-Pudlak syndrome; sarcoldosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension; hyaline membrane disease.

```
the array; Identitying exons in a eutaryour yencome, computating

(a) algorithmically predicting at least one exon from genomic sequences

(c) the eukaryote; and (b) detecting specific hybridisation of detectably

(a) babled nucleic acids from eukaryote lung mRNA, to a single exon probe,

(c) labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,

(c) having a fragment identical to the predicted exon, the probe is included

(d) measuring the expression of each of the exons in several

(c) comprising (a) identifying exons from genomic sequence by the method

(c) microarrays having a probe with the exon, where a common pattern of

(c) microarrays having a probe with the exon, where a common pattern of

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a peptide comprising one

(c) the exons should be assigned to a single gene; a gene;

(c) the exons should be assigned to a single gene; a gene;

(c) the exons should be assigned to a single gene;

(c) the exons should defines (ORF). The probes, pulmonary diseases

(c) the exons should define the specification, or encoded by the present syndrome, sarcoidosis, pulmonary hypertension

(c) the exons are the exon probe of the invention.

(c) the exons are the exon probe of the invention.

(c) the exons are the exon probe of the invention.

(c) the exons are the exon probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic senescent cell antigen and peptide(s) - used to detect antibodies to SCA, study cellular ageing and auto-immune
array; identifying exons in a eukaryotic genome, comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The amino acid sequence is that of the human erythrocyte anion-transport protein (band 3). Amino acids 588-554 (ANION 1) or 812-827 (COCH) code for a peptide which is immuno-reactive with antibodies to senescent cell antigen (SCA). The antigen and peptides can be used in any method or technique involving or requiring the inhibition of the binding of senescent cells in vitro or in vivo. The prods. Can be used in to examine various physiological, biochemical, and immunological mechanisms in humans and other animals, such as those relating to cellular ageing, degeneration, and life span; removal of senescent cells; anion transport across cellular membranes; disease mechanisms where increased senescent cell IgG may play a role, such as homocytopenia purpura; other autoimmune disease mechanisms, such as rheumatoid arthritis and systemic lupus erythematosus; and other diseases such as those involved in malaria and cancer. More specifically, the prods are useful in cosmetic and pharmaceutical compsns., diagnostic kits, and methods for detecting or measuring has such diseases.

Separating anions from a gas or liquid, or diagnosis and treatment contraction diseases.

                                                             This sequence represents the anion exchange protein AEI which is used in a method resulting in the isolation of a novel salamander sodium bicarbonate transporter (NBC). NC proteins and nucleic acid sequences may be used to treat pathological processes including water retention, increased blood pressure, chronic respiratory and metabolic acidosis, inflammation, cell proliferation, cancer, sperm activation/inactivation, bydroencephaly, epilepsy, glaucoma and colitis. Members of the NBC family of proteins can be used (1) as a target to identify agents that block or stimulate activity of an NBC protein, and identify and isolate binding partners that blod NBC, (111) in methods to identify agents that block or stimulate activity of an NBC protein, and it is a starget to assay for NBC-mediated activity, useful in the immunoassays for detecting NBC expression/activity and for purifying an NBC protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             iron-nitrosyl hemoglobin; electron paramagnetic resonance; UV spectra;

involves obtaining electron paramagnetic resonance (EPR) or UV spectra of intricosyl hemoglobin derivatives formed by incubation of limiting nitric oxide (No) with hemoglobin and determining if the composition shows non-cooperativity or cooperativity in binding of No to the hemoglobin. The products of the invention have antianemic; antibacterial; immunosuppressive; vasotropic; antiinflammatory; antiasthmatic; respiratory; antiarthritic and cerebroprotective activity. The products of the invention are used to produce methods of therapy for medical disorders characterized by red blood cell membrane defects and for a variety of hypercoaquiable and vasculopathic states, particularly for patients with septic shock who develop myocardial depression, pancreatitis and progressive respiratory failure, patients with septic shock who develop myocardial depression, concreatitis and progressive respiratory failure, patients with sischemia, patients in a sickle cell crisis and for treating inflammatory conditions such as arthritis, asthma, cerebritis, bronchitis and vasculation or products of the products of the methods are also used for preserving red blood cells
                                                                                                                                                                                                                                                                                                                                                                                                                                            ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-1331 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide; malarial infection; drug resistance; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-1331 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising harmful side effects and drug resistance that may be due to non-specific
              harmful side effects and drug resistance that may be due to non-specific therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; Band 3 polypeptide; malarial infection; drug resistance; vaccine; protozoacide; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated Band 3 polypeptide which selectively binds to merozite surface protein-1, useful for the prevention and treatment of malarial infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated Band 3 polypeptide that comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 protein.
cognate molecule present in the host and subsequently minimising
                                                                                                                                                                   ;

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; vaccination; gene therapy; nutritional supplement;
stem cell proliferation; haematopolesis; nerve tissue regeneration;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS1/gcgdata/geneseg/genesegp-emb1/AA2000.DAT:*/SIDS1/gcgdata/geneseg/genesegp-emb1/AA2001.DAT:*/SIDS1/gcgdata/geneseg/genesegp-emb1/AA2002.DAT:*/SIDS1/gcgdata/geneseg/genesegp-emb1/AA2002.DAT:*/SIDS1/gcgdata/geneseg/genesegp-emb1/AA2003.DAT:*

New isolated Band 3 polypeptide which selectively binds to merozite surface protein-1, useful for the prevention and treatment of malarial infection

```
The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-131 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present invention also provides a vaccine for malaria. The present

New isolated Band 3 polypeptide which selectively binds to merozite surface protein-1, useful for the prevention and treatment of malarial infection

Example; Page 58; 163pp; English.

The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-131 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and harmful side effects and drug resistance that may be due to non specific therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present

Peptide(s) with amino acid motifs in band 3 - used for reducing the adhesiveness of red blood cells for treating malaria, sickle cell disease, thalassemia or diabetes.

Example 2; Page 20; 48pp; English.

AAW01053-W01095 represent peptides isolated from (or based on) regions of the anion transporter band 3 protein. The band 3 protein is present in a million copies per red blood cell, in the form of monomers, dimers, or tetramers. Band 3 protein has two distinct domains, a 43 kD cortein because the form of monomers, dimers, we ater-soluble cytoplasmic domain, and a 55 kD membrane spanning domain. In an number of otherwise-unrelated conditions (such as malaria, and diabetes), there are modifications in band 3, such that there is clustering and a change in the conformation of the protein. Due to this change in protein conformation of the protein. Due to this change in protein conformation (and by the exposure of cryptic adhesive sites), the normally non-adherent erythrocyte becomes a cell with enhanced endothelial adhesiveness. These sequences were found in the putative exofacial loops of band 3, and are epitopes for antibody the adhesiveness of the red blood cells. The peptides can be used for reducing the adhesiveness of red blood cells. The peptides can be used for reducing the adhesiveness of red blood cells in a mammalian protein characterised by a condition selected from Plasmodium falciparum infection, sickle cell disease, thalassaemia and diabetes

                                                                                                                                                        The present invention describes a method for enhancing thrombolysis in a mammal. The method comprises the administration to the mammal an amount of an inhibitor (I) of protein band 3-ligand interaction

Sufficient to enhance thrombolysis. (I) has thrombolytic activity.

The method is useful for enhancing thrombolysis in a mammal. (I) is useful for enhancing fibrinolytic or thrombolytic activity, in the management of acute myocardial infarction, for Ilysis of intracoronary thrombi, for improvement of ventricular function, for reduction of congestive heart failure, for reduction of mortality, for the lysis of pulmonary emboli blocking blood flow to one or more lobes of the lung, for the lysis of acute arterial thrombosis and embolism, for the lysis of thrombosis in deep veins or in cerebral sinuses, to reopen i.v. catheters obstructed by clotted blood or fibrin, to prevent clotting in blood samples drawn from patients for clinical testing and to prevent the recurrence of trom patients for clinical testing and to prevent the recurrence of trom patients for clinical testing and to prevent the recurrence of trombosis in patients by prophylactic administration. The present sequence represents a human band 3 protein predicted exofacial region invention.
                                                                                                                                                                                                                                                                                                                        Anti-Plasmodium falciparum; interaction inhibitor; band 3 protein; thrombolysis; thrombolytic; fibrinolytic; acute myocardial infarction; lysis; ventricular function; congestive heart failure; mortality; acute arterial thrombosis; embolism; thrombosis; cerebral sinus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enhancing thrombolysis in mammals comprises administering an inhibitor of protein band 3-ligand interaction
                                                                                                                                                                                                                                                                                 Human band 3 protein predicted exofacial region loop 7 SEQ ID NO:43.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 58;

The amino acid sequence is that of the human erythrocyte anion-transport protein (band 3). Amino acids 538-554 (ANION 1) or 812-827 (COOH) code for a peptide which is immuno-reactive with antibodies to senescent cell antigen (SCA). The antigen and peptides can be used in any method or technique involving or requiring the inhibition of the binding of senescent cell 1gG to senescent cells in vitro or in vivo. The prods. can be used in to examine various physiological, biochemical, and immunological mechanisms in humans and other animals, such as those relating to cellular ageing, degeneration, and life span; removal of senescent cells; anion transport across cellular membranes; disease mechanisms where increased senescent cell 1gG may play a role, such as haemolytic anaemia, sickle cell anaemia, and idiopathic thrombocytopenia purpura; other autoimmune disease mechanisms, such as haemolytic anaemia, sickle cell anaemia, and idiopathic chrombocytopenia purpura; other autoimmune disease mechanisms, such as rheumatoid arthritis and systemic lupus erythematosus; and other diseases such as those involved in malaria and cancer. More specifically, the prods are useful in cosmetic and pharmaceutical comparations, diagnostic kits, and methods for detecting or measuring compassuring and chromans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

This sequence represents the anion exchange protein AEI which is used in a method resulting in the isolation of a novel salamander sodium bicarbonate transporter (NBC). NBC proteins and nucleic acid sequences may be used to treat pathological processes including water retention, increased blood pressure, chronic respiratory and metabolic acidosis, inflammation, cell proliferation, cancer, sperm activation/inactivation, hydroencephaly, epilepsy, glaucoma and collitis. Members of the NBC family of proteins can be used (1) as a target to identify agents that block or stimulate NBC mediated pH regulation, (ii) as a target or bait to identify and isolate binding partners that bind NBC, (iii) in methods to identify agents that block or stimulate eactivity of an NBC protein, and (iv) as a target to assay for NBC-mediated activity, Anti-NBC antibodies are also useful as modulators of NBC activity, useful in the immunoassays
                                                                                                                        NBC; sodium bicarbonate transporter family; pH regulation; immunoassay; treatment; water retention; blood pressure; acidosis; inflammation; cell proliferation; cancer; sperm activation; inactivation; epilepsy; hydroencephaly; glaucoma; colitis; salammander; ABI; anion exchange.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 detecting NBC expression/activity and for purifying an NBC protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules encoding proteins of the Sodium Bicarbonate Corransporter (NBC) family - useful for identifying agents that agonise or antagonise NBC activity and treating disorders mediated by NBC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó;

physiological effect of a composition comprising hemoglobin which involves obtaining electron paramagnetic resonance (EPR) or UV spectra iron-nitrosyl hemoglobin derivatives formed by incubation of limiting nitric oxide (NO) with hemoglobin and determining if the composition shows non-cooperativity or cooperativity in binding of NO to the memoglobin. The products of the invention have antianemic; antibacterial; immunosuppressive; vasotropic; antiinflammatory; antiasthmatic; respiratory; antiarthritic and cerebroprotective activity. The products of the invention are used to produce methods of therapy for medical disorders characterized by red blood cell membrane defects and for a variety of hypercoagulable and vasculopathic states, particularly for patients with septic shock who develop myocardial depression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pancreatitis and progressive respiratory failure, patients with septicemia as a complication of urinary tract infection and patients with stochmia, patients in a sickle cell crisis and for treating inflammatory conditions such as arthritis, asthma, cerebritis, bronchitis and vasculitis. The methods are also used for preserving red blood cells
Erythrocyte band 3 anion transporter protein; human, hypercoagulation; iron-nitrosyl hemoglobin; electron paramagnetic resonance; UV spectra; EPR; nitric oxide; antianemic; antibacterial; immunosuppressive; vasotropic; antiinflammatory; antiasthmatic; respiratory; antiarthritic; cerebroprotective; red blood cell membrane defect; vasculopathy; septic shock mycoardial depression; pancreattis; sickle cell crisis; urinary tract infection; progressive respiratory failure; septicemia; ischemia; arthritis; asthma; cerebritis; bronchitis; vasculitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method for determining the predominant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining predominant physiological effect of composition comprising hemoglobin used to produce methods of therapy for medical disorders by using EPR or UV spectra of iron nitrosyl hemoglobin derivatives -

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSPO-1 polypeptide or a polypeptide with any of 8 291-131 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising thermpeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; Band 3 polypeptide; malarial infection; drug resistance; vaccine; protozoacide; gene therapy.

inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising harmful side effects and drug resistance that may be due to non-specific therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy -
                                                                                                                                                                                                                                                                                        any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-1331 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon
                                                                                                                                            New isolated Band 3 polypeptide which selectively binds to merozite surface protein-1, useful for the prevention and treatment of malarial
                                                                                                                                                                                                                                                                      The invention relates to an isolated Band 3 polypeptide that comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; vaccination; gene therapy; nutritional supplement;

polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are useful for identifying agents (agonists and antaponists) that bind to them. Cells capressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU2510-AAU3304 represent the amino acid sequences of novel human secreted proteins of the invention. invention relates to novel human secreted polypeptides. The 962 AA; Sequence

Detecting Alzheimer's disease using antibody that recognises aged band 3 protein in tissues - or from reduced degree of band 3 protein phosphorylation, can be applied to blood or brain samples

Claim 6; Page 11; 45pp; English.

This is an aging antigenic band 3 peptide (residues 812-827) to which a specific antibody can bind to. Band 3 is a ubiquitous anion-exchange protein and ages as cells and tissues age. Antibodies have been developed against this aged band 3. These antibodies bind to distinct regions of band 3 in old cells (aging antigenic sites) but not middle aged or young cells. This can be used for detecting Alzheimer's disease. A tissue sample containing band 3 from a patient suspected of having Alzheimer's disease is treated with an antibody that can differentiate between the Alzheimer's (aged) and normal band 3, under complex-forming conditions

in the suspect sample indicates Alzheimer's disease.

This is an aging antigenic band 3 peptide (residues 812-830) to which a specific antibody can bind to. Band 3 is a ubiquitous anion-exchange protein and ages as cells and tissues age. Antibodies have been developed against this aged band 3. These antibodies bind to distinct regions of band 3 in old cells (aging antigenic sites) but not middle aged or young cells. This can be used for detecting Alzheimer's disease. A tissue cample containing band 3 from a patient suspected of having Alzheimer's disease is treated with an antibody that can differentiate between the Alzheimer's (aged) and normal band 3, under complex-forming conditions and detecting any complex formed. A tissue containing band 3 from a healthy control is treated in a similar manner and the amounts of complex formed are compared. A significantly greater formation of complex in the suspect sample as compared with that of the control is indicative of Alzheimer's disease can also be detected by comparing the degrees of phosphorylation of band 3 or its degradation products in suspect and control samples. A significant decrease in phosphorylation ö and detecting any complex formed. A tissue containing band 3 from a healthy control is treated in a similar manner and the amounts of compl formed are compared. A significantly greater formation of complex in the suspect sample as compared with that of the control is indicative of Alzheimer's disease. The diseases can also be detected by comparing the degrees of phosphorylation of band 3 or its degradation products in suspect and control samples. A significant decrease in phosphorylation in the suspect sample indicates Alzheimer's disease. Detecting Alzheimer's disease using antibody that recognises aged band 3 protein in tissues – or from reduced degree of band 3 protein phosphorylation, can be applied to blood or brain samples Band 3 protein; antibody; aging antigenic site; Alzheimer's disease; phosphorylation; detection; epitope. ö Length 16; Indels Aged band 3 peptide (residues 812-830) epitope II. The band 3 protein is present in a million copies per red blood cell, in the form of monomers, dimers, or tetramers. Band 3 protein has two distinct domains, a 43 kD water-soluble cytoplasmic domain, and a 55 kD membrane spanning domain. In an number of otherwise-unrelated conditions (such as malaria, and diabetes), there are modifications in band 3, such that there is clustering and a change in the conformation of the protein. Due to this change in protein conformation (and by the exposure of cryptic adhesive sites), the normally non-adherent erythrocyte becomes a cell with cananced endothelial adhesiveness. These sequences were found in the putative exofacial loops of band 3, and are epitopes for antibody binding. These sequences compete with the altered band 3 protein, and thereby block the adhesiveness of the red blood cells. The peptides can be used for reducing the adhesiveness of red blood cells in a mammalian patient characterised by a condition selected from plasmodium falciparum infection, sickle cell disease, thalassaemia and diabetes.
                                                                            ö

The present invention describes a method for enhancing thrombolysis in a mammal. The method comprises the administration to the mammal and amount of an inhibitor (I) of protein band 3-ligand interaction

sufficient to enhance thrombolysis. (I) has thrombolytic activity.

The method is useful for enhancing thrombolysis in a mammal. (I) is useful for enhancing fibrinolytic or thrombolytic activity, in the management of acute myocardial infarction, for lysis of intracoronary thrombi, for improvement of ventricular function, for reduction of congestive heart failure, for reduction of mortality, for the lysis of pulmonary emboli blocking blood flow to one or more lobes of the lung, for the lysis of acute arterial thrombosis and embolism, for the lysis of thrombosis in deep veins or in cerebral sinuses, to reopen i.v.

catheters obstructed by clotted blood or fibrin, to prevent clot formathon of lysing clots, to prevent clotting in blood samples drawn from patients for clinical testing and to prevent the recurrence of thrombosis in patients by prophylactic administration. The present sequence represents a band 3 protein loop 3 related peptide, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                           infarction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Enhancing thrombolysis in mammals comprises administering an inhibitor of protein band 3-ligand interaction

In Sequence represents the annual external mass mixes, a water as method resulting in the isolation of a novel salamander sodium bicarbonate transporter (NBC). NBC proteins and nucleic acid sequences may be used to treat pathological processes including water retention, increased blood pressure, chronic respiratory and metabolic acidosis, inflammation, cell proliferation, cancer, sperm activation/inactivation, hydroencephaly, epilepsy, glaucoma and colitis. Members of the NBC family of proteins can be used (i) as a target to identify agents that block or stimulate NBC mediated pH regulation, (ii) as a target or bait to identify agents that block or stimulate activity of an NBC, (iii) in methods to identify agents that block or stimulate activity of an NBC protein, and (iv) as a target to assay for NBC-mediated activity. Anti-NBC antibodies are also useful as modulators of NBC activity, useful in the immunoassays for detecting NBC expression/activity and for purifying an NBC protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the anion exchange protein AE2 which is used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE SPECIFICITY: isoform a is widely expressed at similar levels in all tissues examined. Isoforms bl and b2 are predominantly expressed in stommach although they are also detected at lower levels in other tissues. Isoform c1 is stommach-specific. Isoform c2 is expressed at slightly higher levels in lung and stommach than in other tissues. SIGNIANTY: BELONGS TO THE ANION EXCHANGER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PALMITATE (BY SIMILARÍTY).

-!- FUNCTION: PLASMA MEMBRANE ANION EXCHANGE PROTEIN.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: NEDRONAL.
-!- SIMILARITY: BELONGS TO THE ANION EXCHANGER FAMILY.

         -!- TISSUE SPECIFICITY: Isoform a is widely expressed at similar levels in all tissues examined. Isoforms bl and b2 are predominantly expressed in stomach although they are also detected at lower levels in other tissues. Isoform c1 is stomach-specific. Isoform c2 is expressed at slightly higher levels in lung and stomach than in other tissues.
-!- SIMILARITY: BELONGS TO THE ANION EXCHANGER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PALMITATE (BY SIMILARITY).

J. 285:17-23(1992).

-I- FUNCTION: BAND 3 HAS TWO FUNCTIONAL DOMAINS: ITS INTEGRAL DOMAIN MEDIATES A 1:1 EXCHANGE OF INORGANIC ANIONS ACROSS THE MEMBRANE, WHEREAS ITS CYTOPLASMIC DOMAIN PROVIDES BINDING SITES FOR CYTOSKELETAL AND OTHER PROFIEINS (BY SIMILARITY).

-I- SUBUNIT: A DIMER IN SOLUTION, IT SPANS THE MEMBRANE ASYMMETRICALLY AND APPEARS TO BE TETRAMERIC (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: Integral membrane protein.
